

LAKE TODD VILLAGE DISTRICT NEWS 1/28/12

DAM REPAIR PROJECT DONE EXCEPT FOR SPRING SITE WORK

The project to repair the dam is finally “substantially complete.” All of the work except for the spring site work was completed by the end of 2011 and has passed inspection by an engineer from the State Dam Bureau.

The major spring work will be to seed the lawn on and around the new berm on the east side of the dam. On the west side the driveway will be prepared for paving and a new drain will be installed as well as seeding of disturbed areas.

Stop by and check out the new, much higher side walls and other improvements. The dam now meets the State requirements for its “high hazard” class.
